

Merge Changelog: dev » demo

Pull request: #160 — “Merge pull request #160 from GoalPost-Earth/dev”

Merge commit: 44fe669e9a60f55dee6aee9332637770e29a5e6a

Merged: August 6, 2026 by Jesse

Repository: GoalPost-Earth/GoalPost • **Report generated:** August 7, 2026

1. Executive Summary

This promotion moves roughly three weeks of development work (July 15 – August 5, 2026) from the **dev** branch to the **demo** branch. It delivers the third prototype-feedback batch (GOAL-307 through GOAL-319, plus GOAL-323): a new spreadsheet-driven article import, major mobile-experience fixes for chat and navigation, a security fix that makes logout actually end the session, correct author attribution for document-ingested content, cascading soft delete for field contexts, first-class Core Value pulses across search/resonance/history, and a refreshed contributor onboarding story (CONTRIBUTING.md, README, .env.example).

Metric	Value
Commits merged	33 total (20 substantive commits + 13 merge commits)
Upstream pull requests	12 PRs merged into dev (#148–#159), promoted via PR #160
Files changed	114
Lines added / removed	+9,071 / -1,252
Work period	July 15 – August 5, 2026 (merged to demo August 6, 2026)
Tickets covered	GOAL-307, 308, 309, 310, 312, 313, 314, 316, 317, 318, 319, 323
Contributors	ohenekwabena (12 commits), Smith the Agent (5), John-Dag Addy (3); merges by Jesse & John-Dag Addy

2. Highlights by Area

New Features

- **Bulk article import (GOAL-317, PR #157).** A new “Import Articles” flow on field-context Pulses sections: upload a .csv/.xlsx of articles (title, author, date, URL), preview with per-row validation, then create up to 300 pulses per batch with full authorization, idempotency, author resolution, activity logging, and a new 10/hour bulk-import rate limit.
- **Core Value pulses become first-class (GOAL-307).** CoreValuePulse now appears in search, resonance details, history queries, and the ActivePulses list, with correct theming; two legacy unscoped substring searches were retired and goal-pulse search accents fixed from green to blue.
- **ActivePulses dashboard widget.** The previously dormant widget is now mounted on the dashboard with theme-aware color tints and a working “View all / Show less” toggle.

- **Collapsible chat panel and dashboard widgets (GOAL-313, PR #155).** Members can now collapse or hide the chat panel and dashboard widgets to declutter the workspace.

Security Fixes

- **Logout now truly ends the session (GOAL-323).** Previously logout never contacted the server: httpOnly cookies survived and the refresh token was never revoked — and the existing logout API could be abused to force-logout arbitrary users by email. The route is now auth-gated (JWT or bcrypt-verified refresh cookie), cookies are expired unconditionally, revocation is verified, and a dead JS-readable accessToken cookie was removed. Covered by 8 new integration tests.
- **Open-redirect-safe login returnUrl (GOAL-316, PR #158).** The login page now honors ?returnTo= for deep links (e.g. document downloads), pinned on client and server by a new same-origin sanitizer that rejects scheme-relative URLs, backslash escapes, foreign schemes, control characters, and /auth self-references.

Bug Fixes

- **Document-ingest author attribution (GOAL-318, PR #156).** Re-extracts and roster-matched updates now re-point the INITIATED_BY edge to the document's author (conservatively — never stealing authorship someone else holds), and upload-created persons are embedded at upload time instead of waiting for the nightly cron.
- **Field-context deletion cascades (GOAL-319, PR #154).** Deleting a field context now cascade soft-deletes its contents, with a 90-day purge job (new cron route) that permanently removes them.
- **Upload-created people show real detail (GOAL-314, PR #153).** Ingest now captures a person description, and person drawers/profiles surface authored and mentioned pulses via a new Person.initiatedPulses schema relationship — upload-created people are no longer name-only shells.
- **Mobile chat thread controls (GOAL-312, PRs #150–#151).** The floating mobile chat gains a thread switcher and new-conversation button, and a stacking-context fix makes the switcher render above the chat body instead of underneath it.
- **Mobile search bar restored (GOAL-310, PR #159).** The search bar is available again in mobile view.
- **Mobile theme switch restored (GOAL-309, PR #152).** Dark/light mode switching is available again in mobile view.
- **Activity log timestamps (GOAL-307).** Log.createdAt is now stored as a real datetime (with a backfill script for existing rows) and Log.id gains a uniqueness constraint — fixing date filtering/ordering and cutting post-write re-fetch cost by ~97%.
- **Green build restored on dev.** Repaired the tsc + lint build check: stale LangChain 0.x imports repointed to @langchain/core, and 38 pre-existing lint errors fixed properly (typed instead of silenced, React-compiler-safe state patterns).
- **Upload pulse provenance (GOAL-316).** Goal and Story pulses created from document uploads now get the document-download location fallback (previously Resource-only), so every upload pulse links back to its source document.

Documentation & Tooling

- **Contributors guide + README refresh.** New CONTRIBUTING.md (fork-and-PR flow, intake ladder, KB reading requirement, and the rule that demo is promoted from dev on a cadence); README corrected for Node >= 20.9, required init:db, correct clone URLs, and the kb/ docs pointer.
- **.env.example synchronized (PR #148 + GOAL-308, PR #149).** The example env file now documents every variable the app actually reads — ~20 previously undocumented variables added, with notes for platform-injected ones.

- **E2E account cleanup script.** New dev-only npm run `purge:e2e-users` safely removes leftover `@e2e.goalpost.test` signup accounts (`report-by-default`, `--apply` to delete, guarded against prod).
- **Knowledge base updates.** `kb/` records the third prototype-feedback batch (GOAL-313...318), the field-context deletion state machine, and new data-entity constraints.

3. Pull Requests Included

Twelve pull requests were merged into **dev** during this period and promoted to **demo** by PR #160. A handful of commits (listed in Section 4) were pushed to dev directly without a PR.

PR	Title / Scope	Source branch	Merged	By
#148	docs: sync .env.example with actual process.env usage	docs/goal-env-example-drift	Jul 15	John-Dag Addy
#149	GOAL-308: sync .env.example with the variables the app actually reads	fix/goal-308-5335	Jul 20	John-Dag Addy
#150	GOAL-312: show thread controls in mobile floating chat	fix/goal-312-mobile-chat-thread-controls	Jul 21	Jesse
#151	GOAL-312: render mobile thread switcher above chat body	fix/goal-312-mobile-chat-thread-controls	Jul 21	Jesse
#152	GOAL-309: restore dark/light mode switch in mobile view	fix/goal-309-2820	Jul 21	Jesse
#153	GOAL-314: capture person detail at ingest + surface related pulses	fix/goal-314-upload-person-details	Jul 21	Jesse
#155	GOAL-313: allow collapsing/hiding the chat panel and dashboard widgets	fix/goal-313-8245	Jul 30	John-Dag Addy
#154	GOAL-319: cascade soft delete with 90-day purge on field deletion	fix/goal-319-field-context-cascade-delete	Aug 3	Jesse
#156	GOAL-318: re-attribute roster-matched pulses to the document author	fix/goal-318-ingest-author-tribution	Aug 3	Jesse
#157	GOAL-317: spreadsheet-driven bulk upload of articles as pulses	feat/goal-317-article-import	Aug 3	Jesse
#158	GOAL-316: honor login returnUrl for document links + upload pulse locations	fix/goal-316-upload-location-login-wall	Aug 3	Jesse
#159	GOAL-310: restore search bar in mobile view	fix/goal-310-3925	Aug 5	John-Dag Addy
#160	Promotion: merge dev into demo (this changelog)	dev	Aug 6	Jesse

4. Detailed Commit Log

All 20 substantive (non-merge) commits included in the promotion, newest first. Hashes are abbreviated; dates are author dates.

351ff3f fix(auth): end the session on logout — expire cookies + revoke refresh token [GOAL-323]

ohenekwabena · Aug 4, 2026

- Logout previously left a fully usable session: the client never contacted the server, the httpOnly cookie clear was silently ignored, and the refresh token was never revoked. The existing /api/auth/logout route authenticated nobody and could force-logout any user by email.
- The route is now gated by signed JWT (Bearer or cookie) with a bcrypt-verified refresh-cookie fallback; cookies are expired unconditionally while revocation is authorized. The client clears local state first and fires the request with keepalive to avoid a ~2.3s logout delay.

- Also removes a dead login-page write that planted a 7-day JS-readable accessToken cookie. Verified by 8 new integration tests against the real handler and Neo4j, 38/38 auth suites, and browser E2E.

8d13f1f No search bar in mobile view [\[GOAL-310\]](#)

Smith the Agent · Aug 4, 2026

- Restores the search bar in the mobile layout (studio search input and shell changes).

16b0427 fix(import): honor login returnUrl for document links + set location on all upload pulse kinds [\[GOAL-316\]](#)

ohenekwabena · Jul 30, 2026

- Signed-out members following an upload's document link dead-ended on the login page; the login flow now honors ?returnTo=, protected on both client and server by a new same-origin sanitizer (src/lib/auth/safe-return-to.ts) so honoring the parameter cannot open a redirect.
- The document-download-URL location fallback is extended from Resource pulses to Goal and Story pulses, so every pulse created from an upload links back to its source document. Extractor-supplied locations are never overwritten.
- Tests cover the sanitizer accept/reject matrix, the download-route 302-returnTo round trip, and the invoker fallback for all three pulse kinds. Security review approved.

999d2c8 feat(imports): spreadsheet-driven bulk upload of articles as pulses [\[GOAL-317\]](#)

ohenekwabena · Jul 30, 2026

- New "Import Articles" pill on field-context Pulses sections opens a three-step modal: pick a .csv/.xlsx (parsed client-side with SheetJS), preview rows with per-row validation, then per-row created / already-existed / failed outcomes. Nothing is written until confirmed.
- POST /api/import/articles re-validates every row server-side, gates on the caller's edit rights, and routes every write through the authorized write-tool pipeline so each row inherits authorization, idempotency, attribution guards, and activity logs.
- Authors resolve by email (self -> context roster -> contacts) or by name, with a per-batch author cache. Batches cap at 300 rows under a new 10/hour bulk-import rate limit. 45 unit tests; code, security, and Cypher reviews passed.

fd5b8e2 fix(ingest): re-attribute roster-matched pulses to the document author [\[GOAL-318\]](#)

ohenekwabena · Jul 30, 2026

- Attribution previously fired only on pulse creation: a re-extract or a second document that matched an existing pulse kept the uploader's attribution. The extractor now carries the author on updates too, and a conservative helper re-points the INITIATED_BY edge only when the current author is the uploader or absent — it can never steal authorship someone else holds.
- On-upload discovery gains a person-embedding sweep and now also runs after re-extracts, so upload-created people are embedded immediately rather than waiting for the nightly cron.

0fd7351 [Chat] Allow collapsing/hiding the chat panel and dashboard widgets [\[GOAL-313\]](#)

Smith the Agent · Jul 29, 2026

- Adds collapse/hide affordances for the chat panel and dashboard widgets.

9b42a0c fix(field-context): cascade soft delete with 90-day purge on field deletion [\[GOAL-319\]](#)

ohenekwabena · Jul 29, 2026

- Deleting a field context now cascade soft-deletes its contents (new soft-delete and purge modules under src/lib/field-context/ plus a purge-deleted-contexts cron route), with permanently-deleted data purged after 90

days. Backed by a 790-line lifecycle test suite.

de1532e fix(person): capture person detail at ingest + surface related pulses [\[GOAL-314\]](#)

ohenekwabena · Jul 21, 2026

- Upload-created people showed only a name. Root causes: the person-extraction schema asked the model for names only (so nodes were minted with no description), and person detail surfaces derived pulses only from owned WeSpaces — which ingest-created people never have.
- Ingest now captures a nullable person description (fill-gaps, never clobbering richer notes); the schema gains `Person.initiatedPulses`; and both the person drawer and profile page render the description plus a “Related pulses” section, each pulse still auth-filtered.
- An integration test seeds the exact ingest shape and proves the uploader reads the full gated profile while outsiders are filtered. Existing name-only people need re-ingestion to backfill.

c6a9964 No dark mode and light mode switch in mobile view [\[GOAL-309\]](#)

Smith the Agent · Jul 21, 2026

- Restores the dark/light theme switch in the mobile layout.

91bb686 fix(chat): render mobile thread switcher above chat body [\[GOAL-312\]](#)

ohenekwabena · Jul 21, 2026

- The thread dropdown was present but painted underneath the chat content: the panel header’s backdrop-filter created a stacking context that trapped the popover’s z-index. Promoting the header to relative z-10 lifts the whole context above the body.

d0a27da fix(chat): show thread controls in mobile floating chat [\[GOAL-312\]](#)

ohenekwabena · Jul 21, 2026

- Mobile forces the floating chat layout, which never rendered the threads sidebar — leaving no way to reach chat history or start a new thread on a phone. The floating panel header gains a `ThreadSwitcher` and a new-conversation button, and the loading spinner is scoped and z-raised so thread switches no longer flash the canvas behind the panel.

cba599d fix(build): restore green tsc + lint build check on dev

John-Dag Addy · Jul 20, 2026

- tsc: legacy agent tests imported `LangChain 0.x` paths and a deleted module; repointed to `@langchain/core/*` and re-exported `extractIds`.
- lint: 38 pre-existing errors fixed properly — real types instead of any, React-compiler rules refactored (lazy state init for `localStorage` hydration, `useSyncExternalStore` where values render into markup, render-time state adjustment) rather than downgraded; only three documented eslint-disables remain for genuinely effectful cases.

12ba298 chore(scripts): add dev-only purge for leftover E2E accounts

ohenekwabena · Jul 20, 2026

- `npm run purge:e2e-users` reports (and with `--apply` deletes) leftover E2E signup accounts. Dev-only with a prod-URI guard, scoped strictly to the reserved `@e2e.goalpost.test` domain, and only deletes accounts whose owned Space is empty.

f2585a7 feat(dashboard): mount ActivePulses widget with themed tints and expand toggle

ohenekwabena · Jul 20, 2026

- Mounts the previously dormant `ActivePulses` widget below `SpacesOverview` on the dashboard. Hardcoded per-type colors are replaced with theme-derived tints so the widget re-themes across light/dark and theme variants, and the dead “View Pulses” button becomes a real View all / Show less toggle.

ae39f61 fix(activity-log): store Log.createdAt as datetime, add Log.id constraint [\[GOAL-307\]](#)

ohenekwabena · Jul 20, 2026

- New Log rows store createdAt as a real Neo4j datetime (matching the SDL contract), fixing silently-empty date filters and mixed-type ordering. A new log_id_unique constraint turns id-keyed re-fetches into index seeks (~97% dbHit reduction, PROFILE-verified).
- Ships scripts/normalize-log-created-at.ts (npm run normalize:log-created-at) to backfill existing string rows; dry-run by default. Deploy note: run the backfill with the deploy so no environment sits in a mixed string/datetime window.

c7a4330 feat(pulse): surface CoreValuePulse in search, resonance & history [\[GOAL-307\]](#)

ohenekwabena · Jul 20, 2026

- CoreValuePulse gains the same root query and authorization rules as sibling pulse types and is added to resonance/history query fragments, renderable resonance details, and the ActivePulses list. Two legacy unscoped substring searches are retired.
- Also fixes goal-pulse search accents (goals were wearing the resource green), retargets the agent's core-value Cypher example at the current schema, and makes search sub-query ordering deterministic.

03dbfbb Sync .env.example with the variables the app actually reads [\[GOAL-308\]](#)

Smith the Agent · Jul 20, 2026

- Follow-up alignment of .env.example with actual environment-variable usage.

ecd28fc docs(kb): record third prototype-feedback batch (GOAL-313...318)

John-Dag Addy · Jul 20, 2026

- Knowledge-base entry for prototype feedback sheet rows 18–22.

2316c60 docs: sync .env.example with actual process.env usage

Smith the Agent · Jul 16, 2026

- Audited every process.env read in the repo and documented ~20 previously missing variables (Neo4j aliases and prod backfill vars, LLM provider selection, OpenAI tuning, seed-user, Redis, cron, logging, CORS), plus notes for platform-injected variables. NEO4J_ENCRYPTED flagged for a human decision rather than silently removed. Docs only.

63b36ef docs: add contributors guide and refresh README for prototype 1.8

John-Dag Addy · Jul 15, 2026

- Adds CONTRIBUTING.md (fork-and-PR flow, intake ladder, KB reading requirement, and the demo-promoted-from-dev cadence rule) and rewrites README.md, fixing stale claims that blocked setup: dead docs pointer, wrong clone URLs, Node 18 vs required >=20.9, and init:db wrongly described as optional when it creates required constraints and vector indexes.

5. Appendix: Files Changed

Net difference on demo introduced by the merge (compared against the demo tip before the merge): **114 files, +9,071 insertions, -1,252 deletions.**
